						168	

Note: A student will be eligible to get UG Degree with Honors if he/she completes and additional 18-20 credits. This should be acquired through MOOCs platforms.

Also, a student must undergo a mandatory 6 months of internship in the Industry/Research Institutions, evaluation of which will be done by 7th semester.

Annexure I

Semester-wise Credit Distribution

SEMESTER	CREDITS
I	21
II	20
III	22
IV	22
V	22
VI	22
VII	20
VIII	18
Total	167 credit

Annexure II

List of suggestive Course under Programme Elective Courses:

I. Structural Engineering

1. Structural Analysis-I &II
2. Introduction to Finite Element analysis
3. Masonry Structures
4. Prestressed Concrete
5. Design of Steel Structures
6. Bridge Engineering, I & II
7. Structural Dynamics
8. Earthquake Engineering
9. Rehabilitation/Restoration of structures
10. Steel Concrete Composite structures

II. Construction Engineering & Management

1. Construction Productivity
2. Formwork Engineering
3. Construction Cost Analysis
4. Contracts Management
5. Energy Efficient Buildings

III. Geotechnical Engineering

1. Foundation Engineering

2. Earth Retaining Structures

IV. Transportation Engineering

1. Pavement Materials
2. Pavement Design
3. Geometric Design of Highways
4. Airport Planning and Design
5. Railway Engineering
6. Smart Cities

V. Environmental Engineering

1. Physico-Chemical Processes for Water and Wastewater Treatment
2. Biological Processes for Contaminant Removal
3. Rural Water Supply and Onsite Sanitation Systems
4. Solid and Hazardous Waste Management
5. Environmental Impact Assessment and Life Cycle Analyses
6. Industrial Waste Water Management

VI. Hydrology & Water Resources Engineering

1. Water Quality and Management
2. Surface Hydrology
3. Groundwater Engineering
4. Watershed Conservation and Management
5. Urban water Infrastructure
6. Integrated water resource management

VII. Hydraulics

1. Design of hydraulic structures/Irrigation Engineering
2. Open Channel flow
3. River Engineering
4. Hydraulic modelling
5. Basics of computational hydraulics
6. Transients in closed conduits
7. Urban Hydrology and Hydraulics
8. Groundwater

SYLLABUS OF I & II SEMESTER

DETAILED SYLLABUS OF 1st SEMESTER

Paper I/Subject Name: Chemistry

Subject Code: CHY022C101(BSC)

L-T-P-C – 3-0-2-4

Credit Units: 04

Scheme of Evaluation: TP

Objective:

The objectives of the course are to s to acquaint the students with the basic phenomenon/concepts of chemistry, the student faces during course of their study in the industry and Engineering field and to understand the new developments and breakthroughs efficiently in engineering and technology.

Prerequisites: Concepts of +2 level Chemistry

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the basic properties of chemical reactions	BT 1
CO 2	Interpret periodic properties such as ionization potential, electronegativity, oxidation states, electronegativity and bulk properties and processes using	BT 2
CO 3	Experiment with major chemical reactions that are used in the synthesis of molecules.	BT 3
CO 4	Analyze microscopic chemistry in terms of atomic and molecular orbitals and intermolecular	BT 4

Detailed Syllabus:

Module s	Topics	Course Content	Periods
I.	Atomic and Molecular Structure	Schrodinger equation. Particle in a box solution and their applications for conjugated molecules and nanoparticles. Forms of the hydrogen atom wave functions and the plots of these functions to explore their spatial variations. Molecular orbitals of diatomic molecules and plots of the multicenter orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic. Pi-molecular orbitals of butadiene and benzene and aromaticity. Crystal field theory and the energy level diagrams for transition metal	16
II.	Spectroscopic Techniques and Applications, Intermolecular Forces and Potential Energy Surfaces	Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclear magnetic resonance and magnetic resonance imaging, surface characterization techniques. Diffraction and scattering.	17

		Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena. Potential energy surfaces of H ₂ , H ₂ F and HCN and trajectories on these surfaces.	
III.	Use of free Energy in Chemical Equilibria and Periodic Properties	<p>Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and EMF. Cell potentials, the Nernst equation and applications. Acid base, oxidation reduction and solubility equilibria. Water chemistry. Corrosion. Use of free energy considerations in metallurgy through Ellingham diagrams.</p> <p>Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries</p>	16
IV.	Stereochemistry, Organic Reactions and Synthesis of a Drug Molecule	<p>Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Isomerism in transitional metal compounds</p> <p>Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule</p>	17
TOTAL			66

Chemistry Lab Syllabus

Total Lab Hours for the semester = 30 (2 hours per week)

Minimum 10 Laboratory experiments based on the following-

1. Determination of surface tension and viscosity.
2. Thin layer chromatography.
3. Ion exchange column for removal of hardness of water.
4. Determination of chloride content of water.
5. Colligative properties using freezing point depression.
6. Determination of the rate constant of a reaction.
7. Determination of cell constant and conductance of solutions.
8. Potentiometry - determination of redox potentials and EMFs.
9. Synthesis of a polymer/drug.
10. Saponification/acid value of an oil.

11. Chemical analysis of a salt.
12. Lattice structures and packing of spheres.
13. Models of potential energy surfaces.
14. Chemical oscillations- Iodine clock reaction.
15. Determination of the partition coefficient of a substance between two immiscible liquids.
16. Adsorption of acetic acid by charcoal.
17. Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

Additional Readings:

1. Organic Chemistry: Structure and Function by K. P. C. Vollhardt and N. E. Schore, 5th Edition, <http://bcs.whfreeman.com/vollhardtschore5e/default.asp>
2. NPTEL Course on Chemistry - I by Prof. Mangala Sunder Krishnan, IITM

Paper II/Subject Name: Mathematics-II	Subject Code: MAT022C102 (BSC)
L-T-P-C – 3-1-0-4	Credit Units: 04
	Scheme of Evaluation: T

Objective:

The objectives of the course are to enable students to achieve conceptual understanding and to retain the best traditions of traditional calculus.

Prerequisites: level Concepts of Mathematics I

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	List the methodologies used for solving various equations	BT 1
CO 2	Understand essential tool of matrices and linear algebra in a comprehensive manner	BT 2
CO 3	Utilize the essential tools in the field of applied sciences and related fields.	BT 3
CO 4	Analyze and evaluate the qualitative behavior of solutions of systems of differential equations and interpret in the context of an underlying model.	BT 4 & 5

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Matrices	Linear Systems of Equations; Linear Independence; Rank of a Matrix; Determinant, Inverse of a matrix, rank-nullity theorem; System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Determinants; Eigenvalues and eigenvectors; Orthogonal transformation; Diagonalization of matrices; Cayley-Hamilton Theorem.	16
II.	First order ordinary differential equations & Ordinary differential equations of higher orders	<i>Exact, linear and Bernoulli's equations. Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type.</i> <i>Second order linear differential equations with variable coefficients: Euler-Cauchy equations, solution by variation of parameters; Power series solutions: Legendre's equations and Legendre polynomials, Frobenius method, Bessel's equation and Bessel's functions of the first kind and their properties.</i>	17

III.	Complex Variable – Differentiation:	Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.	16
IV	Complex Variable – Integration:	Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy Integral formula (without proof), Liouville's theorem and Maximum-Modulus theorem (without proof); Taylor's series, zeros of analytic functions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals using the Bromwich contour.	17

Paper III/Subject Name: Programming for Problem Solving Subject Code: CSE022C104(ESC)

L-T-P-C – 3-0-2-4

Credit Units: 04

Scheme of Evaluation: TP

Objective:

The objectives of the course are to make the students capable of using C programming to solve basic as well as advanced computing problems.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	List the various constructs used in programming	BT 1
CO 2	Demonstrate the working of C programming language.	BT 2
CO 3	Apply the programming concepts to solve various problems.	BT 3
CO 4	Analyze and debug the errors while writing the programs.	BT 4

Detailed Syllabus:

Module s	Topics	Course content	Hours
I	Fundamentals of Programming	Introduction to Programming; Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.) Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudocode with examples. From algorithms to programs; source code, variables (with data types) variables and memory locations, Syntax and Logical Errors in compilation, object and executable code.	15
II	Expressions, Conditional Operators and Loops	Arithmetic expressions and precedence. Conditional Branching and Loops. Writing and evaluation of conditionals and consequent branching. Iteration and loops. Arrays, Arrays (1-D, 2-D), Character arrays and Strings	15
III	Functions, Recursion, Sorting	Basic Algorithms, Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required). Function, Functions (including using built in libraries), Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference. Recursion, Recursion as a different way of solving problems. Example	15

		programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.	
IV	Advanced Programming Concepts using C	Structures, Defining structures and Array of Structures, Pointers, Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling.	15
TOTAL			60

Programming for Problem Solving Lab Syllabus

Detailed Syllabus:

Total Lab Hours for the semester = 30 (2 hours per week)

Minimum 20 Laboratory experiments based on the following-

1. Character set, Tokens, Keywords and Identifiers, Constants, variables, data types, statements, comments, declaration of storage class, assigning values to variables.
2. Managing I/O, reading and writing characters, formatted Input/output.
3. Arithmetic operators, relational operators, logical operators, assignment operators, increment & decrement operators, conditional operators, bitwise operators, special operators.
4. Importance of decision making, decision making with if statement, if-else statement, nested if-else statements, switch-case statement.
5. Importance of iterative statements, the while statement, do-while statement, for statement, nested for looping.
6. Significance of Arrays, creation and use of one & two-dimensional arrays
7. Declaration and use of string variables, reading and writing strings.
8. Benefits of user-defined functions, creation and use of user-defined functions, parameter passing, return types.
9. Use of Pointers, declaration & initialization of pointer variables, accessing a variable through its pointer.
10. Defining, opening & closing files in C.

Credit Distribution		
Lecture/ Tutorial	Practicum	Experiential Learning

3. NPTEL course on Problem Solving Through Programming in C by Prof. Anupam Basu, IIT, Kharagpur

Paper IV/Subject Name: Biology for Engineers

Subject Code: CEE022C103 (BSC)

L-T-P-C – 3-0-0-3

Credit Units: 03

Scheme of Evaluation: T

Objective:

The objectives of the course are to familiarize the students with the basic biological concepts and their engineering applications and provide an appreciation of how biological systems can be re-designed as substitute products for natural systems.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the basic terminologies used in Biology	BT 1
CO 2	Demonstrate the basic biological concepts via relevant industrial applications and case studies.	BT 2
CO 3	Apply the concepts of biomimetics for specific requirements.	BT 3
CO 4	Assess the principles of design and development, for exploring novel bioengineering projects.	BT 4

Detailed Syllabus:

Modules	Topics	Course content	Hours
I	Biomolecules and their Applications	Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/detergents), Enzymes (glucose-oxidase in biosensors, lignolytic enzyme in bio-bleaching).	15
II	Human Organ Systems and Bio Designs	Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye).Heart as a pump system (architecture, electrical signalling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators). Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine). Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis).	15

III	Nature- Bioinspired Materials and Mechanisms	Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swimsuits), Kingfisher beak (Bullet train). Human Blood substitutes - hemoglobin-based oxygen carriers (HBOCs) and perfluorocarbons (PFCs).	15
IV	Trends In Bioengineering	Bioprinting techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bioimaging and Artificial Intelligence for disease diagnosis. Selfhealing Bioconcrete (based on bacillus spores, calcium lactate nutrients and biomineralization processes) and Bioremediation and Biomining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).	15

Paper V/Subject Name: Manufacturing Practices Workshop (ESC)	Subject Code: MEE022C115
L-T-P-C – 0-0-4-2	Credit Units: 02
	Scheme of Evaluation: P

Objective:

The objectives of the course are to provide exposure to the students with hands-on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Label the various techniques used under mechanical engineering	BT 1
CO 2	Understand the different manufacturing processes which are commonly employed in the industry	BT 2
CO 3	Utilize tools, instruments and techniques learnt to perform basic household chores in terms of house wiring, carpentry etc	BT 3
CO 4	Experiment using the tools and techniques learnt for various purposes and decide on the best prospect.	BT 4

Detailed Syllabus:

Total Lab Hours for the semester = 40 (4 hours per week)

Minimum 10 Laboratory experiments based on the following-

The lecture sessions will be on the following topics:

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods.
- CNC machining, Additive manufacturing.
- Fitting operations & power tools.
- Electrical & Electronics.
- Carpentry.
- Plastic moulding, glass cutting.
- Metal casting.
- Welding (arc welding & gas welding), brazing g topics:

And the lab sessions will on the topics:

- Machine shop
- Fitting shop
- Carpentry
- Electrical & Electronics
- Welding shop (Arc welding + Gas welding)
- Casting
- Smithy
- Plastic moulding & Glass Cutting

Paper VI/Subject Name: Universal Human Values	Subject Code: BHS (HSMC)
L-T-P-C – 2-0-0-2	Credit Units: 02
	Scheme of Evaluation: T

Objective:

The objectives of the course are to help the students appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the basic need of human values in real life	BT 1
CO 2	Understand the importance of following the basic universal human values	BT 2
CO 3	Apply the holistic understanding in one's day-today life so as to keep oneself happy and to socialize with nature, society, etc	BT 3
CO 4	Analyze the harmony within human beings by distinguishing the needs of the self and the body.	BT 4

Detailed Syllabus:

Modules	Topics	Course content	Periods
I	Value Education	Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education), Understanding Value Education, Sharing about Oneself, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Exploring Human Consciousness, Happiness and Prosperity – Current Scenario, Lectured, Method to fulfil the Basic Human Aspirations, Exploring Natural Acceptance	11
II	Harmony in Human Being	Understanding Human being as the Co-existence of the Self and the Body, distinguishing between the Needs of the Self and the Body, Exploring the difference of Needs of Self and Body, The Body as an Instrument of the Self Understanding Harmony in the Self, Exploring Sources of Imagination in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health, Exploring Harmony of Self with the Body	11
III	Harmony in the Family & Society	Harmony in the Family – the Basic Unit of Human Interaction, "Trust" – the Foundational Value in Relationship", Exploring the Feeling of Trust, 'Respect' – as the Right Evaluation, Exploring the Feeling of Respect, Other Feelings, Justice in Human-to-Human Relationship Understanding Harmony in the Society, Vision for the	11

		Universal Human Order, Exploring Systems to fulfil Human Goal	
IV	Harmony in Nature & Implications of Holistic Understanding	Understanding Harmony in the Nature, Interconnectedness, self-regulation and Mutual Fulfilment among the Four Orders of Nature, Exploring the Four Orders of Nature, Realizing Existence as Co-existence at All Levels, The Holistic Perception of Harmony in Existence, Exploring Co-existence in Existence. Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, Exploring Ethical Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Exploring Humanistic Models in Education, Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession Exploring Steps of Transition towards Universal Human Order	11

Paper VII/Subject Name: Sports and Yoga

Subject Code: CEE022C117 (MC)

L-T-P-C – 0-0-2-1

Credit Units: 01

Scheme of Evaluation: P

Objective:

The objectives of the course are to make the students understand the importance of sound health and fitness principles as they relate to better health, to expose the students to a variety of physical and yogic activities aimed at stimulating their continued inquiry about Yoga, physical education, health and fitness and to develop among students an appreciation of physical activity as a lifetime pursuit and a means to better health.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Choose the best form of yoga/ exercise for them	BT 1
CO 2	Understand basic skills associated with yoga and physical activities including strength and flexibility, balance and coordination	BT 2
CO 3	Experiment with different forms of yoga to keep oneself physically fit and mentally strong	BT 3
CO 4	Assess current personal fitness levels	BT 4

Detailed Syllabus:

Modules	Topics	Course content	Periods
I	Physical Education, Olympic Movement, Fitness, Wellness & Lifestyle	Meaning & definition of Physical Education. Aims & Objectives of Physical Education. Changing trends in Physical Education, Ancient & Modern Olympics (Summer & Winter), Olympic Symbols, Ideals, Objectives & Values, Awards and Honours in the field of Sports in India (Dronacharya Award, Arjuna Award, Dhayanchand Award, Rajiv Gandhi Khel Ratna Award etc., Meaning & Importance of Physical Fitness & Wellness, Components of Physical fitness, o Components of Health-related fitness, Components of wellness, Preventing Health Threats through Lifestyle Change, Concept of Positive Lifestyle.	5
II	Anatomy & Physiology in Physical Education, Sports, Yoga & Postures	Define Anatomy, Physiology & Its Importance, ffect of exercise on the functioning of Various Body Systems. (Circulatory System, Respiratory System, Neuro-Muscular System etc.), Meaning & Importance of Kinesiology & Biomechanics in Physical Edu. & Sports, o Newton's Law of Motion & its application in sports. o Friction and its effects in Sports, Meaning and Concept of Postures, Causes of Bad Posture. Advantages & disadvantages of weight training. Concept & advantages of Correct Posture. Common Postural Deformities – Knock Knee; Flat Foot; Round Shoulders; Lordosis, Kyphosis, Bow Legs and Scoliosis. Corrective Measures for Postural Deformities	5
		Meaning & Importance of Yoga, Elements of Yoga, Asanas, Pranayama, Meditation & Yogic Kriyas, yoga for concentration & related Asanas (Sukhasana; Tadasana; Padmasana &	

III	Yoga & Lifestyle	Shashankasana) Relaxation Techniques for improving concentration - Yog-nidra, Asanas as preventive measures. Hypertension: Tadasana, Vajrasana, Pavan Muktasana, Ardha Chakrasana, Bhujangasana, Sharasana. Obesity: Procedure, Benefits & contraindications for Vajrasana, Hastasana, Trikonasana, Ardh Matsyendrasana. Back Pain: Tadasana, Ardh Matsyendrasana, Vakrasana, Shalabhasana, Bhujangasana. Diabetes: Procedure, Benefits & contraindications for Bhujangasana, Paschimottasana, Pavan Muktasana, Ardh Matsyendrasana. Asthema: Procedure, Benefits & contraindications for Sukhasana, Chakrasana, Gomukhasana, Parvatasana, Bhujangasana, Paschimottasana, Matsyasana.	5
IV	Training, Planning and Psychology in Sports	Meaning of Training, Warming up and limbering down, Skill, Technique & Style, Meaning and Objectives of Planning. Tournament – Knock-Out, League/Round Robin & Combination. Definition & Importance of Psychology in Physical Edu. & Sports, Define & Differentiate Between Growth & Development, Adolescent Problems & Their Management, Emotion: Concept, Type & Controlling of emotions, Meaning, Concept & Types of Aggressions in Sports. Psychological benefits of exercise. Anxiety & Fear and its effects on Sports Performance. Motivation, its type & techniques. Understanding Stress & Coping Strategies	5

DETAILED SYLLABUS OF 2nd SEMESTER

Paper I/Subject Name: Physics	Subject Code: PHY022C201(BSC)
L-T-P-C – 3-0-2-4	Credit Units: 04 Scheme of Evaluation: TP

Objective:

The objectives of the course are to make the students enhance the fundamental knowledge in Physics and its applications relevant to various streams of Engineering and Technology

Prerequisites: Concepts of Physics of +2 level

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Study the basic concepts of Physics.	BT 1
CO 2	Understand the basic concepts of Physics.	BT 2
CO 3	Solve problems in wave mechanics.	BT 3
CO 4	Analyse knowledge in calculating red and blue shift and also in acoustics.	BT 4

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Classical Mechanics and Dynamics	Transformation of scalars and vectors under Rotation transformation; Forces in Nature; Newton's laws and its completeness in describing particle motion; Form invariance of Newton's Second Law; Solving Newton's equations of motion in polar coordinates; Problems including constraints and friction; Extension to cylindrical and spherical coordinates. Potential energy function; $F = - \text{Grad } V$, equipotential surfaces and meaning of gradient; Conservative and non- conservative forces, curl of a force field; Central forces; Conservation of Angular Momentum; Energy equation and energy diagrams; Elliptical, parabolic and hyperbolic orbits; Kepler problem; Application: Satellite manoeuvres.	17
II.	Advanced Dynamics and Oscillatory Motion	Non-inertial frames of reference; Rotating coordinate system: Five-term acceleration formula. Centripetal and Coriolis accelerations; Applications: Weather systems, Foucault pendulum; Harmonic oscillator; Damped harmonic motion – over-damped, critically damped and lightly- damped oscillators; Forced oscillations and resonance.	16
III.	Rigid Body Dynamics and Kinematics	Definition and motion of a rigid body in the plane; Rotation in the plane; Kinematics in a coordinate system rotating and translating in the plane; Angular momentum about a point of a rigid body in planar motion; Euler's laws of motion, their independence from Newton's laws, and their necessity in describing rigid body motion; Examples.	16

IV	Advanced Rigid Body Dynamics: Three-Dimensional Motion	Introduction to three-dimensional rigid body motion — only need to highlight the distinction from two-dimensional motion in terms of (a) Angular velocity vector, and its rate of change and (b) Moment of inertia tensor; Three-dimensional motion of a rigid body wherein all points move in a coplanar manner: e.g. Rod executing conical motion with center of mass fixed — only need to show that this motion looks two-dimensional but is three-dimensional, and two-dimensional formulation fails.	17
TOTAL			66

Physics Lab Syllabus

Detailed Syllabus:

Experiment	Experiment Title	Lab Hours
I	Determination of Moment of Inertia of a given solid about its own axis by using M.I. Table	2
II	Determination of Young's Modulus using Searle's Apparatus	2
III	Determination of Rigidity of Modulus of the material of the given rod by Statistical method	2
IV	Determination of Powers of Given lenses using an Optical Bench i. Concave Lens, ii Convex Lens	2
V	Determination of Resistance of a Galvanometer using Post Office Box.	2
VI	To determine the mechanical equivalent of heat by Joule's calorimeter	2
VII	Determination of ratio of E.M.F of two cells using Potentiometer.	2
VIII	To determination of the focal length of a convex mirror with the help of an auxiliary lens.	2
IX	Determination of Horizontal Components of Earth's Magnetic field using Magnetometer	2
X	Determination of coefficient of Viscosity of water by Capillary Flow Method	2

Paper II/Subject Name: Mathematics-I**Subject Code: MAT022C202(BSC)****L-T-P-C – 3-1-0-4****Credit Units: 04****Scheme of Evaluation: T****Objective:**

The objectives of the course are to teach the students Mathematics fundamentals necessary to formulate, solve and analyze engineering problems.

Prerequisites: Concepts of Mathematics of +2 level

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define basic terminologies of calculus	BT 1
CO 2	Understand the applications of differential and integral calculus in different fields of Engineering.	BT 2
CO 3	Apply the single and multivariable differential and Integral calculus in engineering problems.	BT 3
CO 4	Analyze and assess the patterns in series.	BT 4 & 5

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I	Basic Calculus:	Curvature, evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions. Rolle's Theorem, Mean value theorems and applications; Extreme values of functions; Linear approximation; Indeterminate forms and L'Hospital's rule.	10
II	Sequences and Series:	Limits of sequence of numbers, Calculation of limits, Infinite series; Tests for convergence; Power series, Taylor and Maclaurin series; Taylor theorem, convergence of Taylor series, error estimates.	20
III	Multivariable Calculus (Differentiation):	Limit, continuity and partial derivatives, directional derivatives, gradient, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers.	10
IV	Multivariable Calculus (Integration):	Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes, Center of mass and Gravity (constant and variable densities); Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds; Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Gradient, curl and divergence, Theorems of Green, Gauss and Stokes.	20

Paper III/Subject Basic Electrical Engineering**Subject Code: CSE022C203(ESC)****L-T-P-C – 3-0-2-4****Credit Units: 04****Scheme of Evaluation: TP****Objective:**

The objectives of the course are to make students understand the basic electrical terminologies and familiarize them with the basic concepts of D.C., single-phase and three-phase A.C. networks.

Prerequisites: Basic concepts of D.C. networks of Class XII, Electromagnetic Induction and A.C. Fundamentals etc.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Recall the basic concepts of electrical engineering	BT 1
CO 2	Understand the concept behind basic electric and magnetic circuits.	BT 2
CO 3	Apply the working principles of electrical machines and power converters in real-life.	BT 3
CO 4	Analyze DC circuits using Ohm's Law and Kirchhoff's Laws, and understand the principles of electromagnetism	CO 4

Detailed Syllabus:

Modules	Topic	Course Content	Hours
I.	DC Circuits	Electrical Circuit Elements – The resistance element, the inductance element, the capacitance element. Voltage & Current source, practical & ideal voltage and current sources, source transformation. Kirchhoff's Laws, Analysis of simple circuits with DC excitation – series circuit, parallel circuit, voltage and current divider rule, star -delta conversion, Maxwells mesh current method, nodal voltage analysis , Network Theorems – Thevenin's Theorem, Nortons Theorem, Superposition theorem	12
II.	AC Circuits	AC fundamentals – generation of alternating voltage, representation of sinusoidal waveform, concept of frequency, cycle, time period, instantaneous value, average value, peak value, RMS value, phasor representation. Single phase AC Circuits – analysis of single-phase AC circuits consisting of R-L-C parameters, apparent power, real power, reactive power, power factor and its significance. Analysis of R-C series circuit, R-L-C series circuit, analysis of AC parallel circuits	20

III.	Electrical Machines:	Principle of operation and construction of single-phase transformers. EMF equation, losses, efficiency and voltage regulation. DC Machines – Constructional details of a DC Machine; EMF Equation of a DC machine, Types of DC Machines, Applications of DC Generators, operation of a DC machine as a motor, Torque equation, importance of back emf, speed equation, speed regulation, starting a DC motor, types of DC Motor, applications of DC motors	20
IV.	Electrical Installations:	Electrical Power Supply System. Three phase four wire distribution system. Protection of electrical installations against overload, short circuit and earth fault. Protective devices for overload, short circuit, earth fault and electric shock – SFU, MCB, ELCB. Earthing – difference between neutral wire & earth wire, methods of earthing of domestic fittings and appliances. Types of wires, cables and wiring used in electrical installations.	14
TOTAL			66

Basic Electrical Engineering Lab Syllabus

Total Lab Hours for the semester = 30 (2 hours per week)

Minimum 10 Laboratory experiments based on the following-

Lab	Experiments	Hours
I	To verify Thevenin's Theorem for DC network	2
II	To verify Maximum Power Transfer Theorem for DC network	2
III	Study of R-L-C Series circuit and determine R,L,C, $\cos \Phi$, P and Q and draw the phasor diagram	2
IV	Study of R-L-C Parallel circuit and determine R,L,C, $\cos \Phi$, P and Q and draw the phasor diagram	2
V	Calibration of a milli-ammeter as a voltmeter.	2
VI	To determine the ohmic and effective resistance (armature winding)	2
VII	To study the characteristics of a filament lamp	2
VIII	To measure the power in a single-phase load using one wattmeter	2
IX	To measure the insulation resistance using Megger	2
X	Demonstration of house wiring	2

Paper IV/Subject Name: Engineering Graphics & Design	Subject Code: CEE022C204(ESC)
L-T-P-C – 2-0-4-4	Credit Units: 04
	Scheme of Evaluation: TP

Objective:

The objectives of the course are to make students understand the process of drawing projections and sections and basic engineering drawing formats and to convert sketches to engineered drawings.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Relate with the concepts of drawings and projections	BT 1
CO 2	Understand the dimension and figures using the drawing instruments and acquire visualisation skills, projection of points, etc.	BT 2
CO 3	Utilize engineering curves in tracing the paths of simple machine components.	BT 3
CO 4	Analyse and assess sketches to convert them to engineered drawings.	BT 4

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Introduction and Projections	Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales; Principles of Orthographic Projections- Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes; Covering those inclined to both the Planes- Auxiliary Views; Draw simple annotation, dimensioning and scale. Floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc	11
II.	Angular Solids and Isometric Projections	Prism, Cylinder, Pyramid, Cone – Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw the sectional orthographic views of geometrical solids, objects from industry and dwellings (foundation to slab only). Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions;	11
III.	Overview of Computer Graphics	Listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.; Isometric Views of lines,	11

		Planes, Simple and compound Solids]. Consisting of set up of the drawing page and the printer, including scale settings, setting up of Modules and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerancing; Orthographic constraints, Snap to objects manually and automatically; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles;	
IV	Customisation and CAD drawing	Covering applying dimensions to objects, applying annotations to drawings; Setting up and use of Layers, layers to create drawings, Create, edit and use customized layers; Changing line lengths through modifying existing lines (extend/lengthen); Printing documents to paper using the print command; orthographic projection techniques; Drawing sectional views of composite right regular geometric solids and project the true shape of the sectioned surface; Drawing annotation, Computeraided design (CAD) software modeling of parts and assemblies. Parametric and non-parametric solid, surface, and wireframe models. Part editing and two-dimensional documentation of models. Planar projection theory, including sketching of perspective, isometric, multiview, auxiliary, and section views. Spatial visualization exercises. Dimensioning guidelines, tolerancing techniques; dimensioning and scale multi views of dwelling;	11

Paper V/Subject Name: English for Technical Writing	Subject Code: CEN982A203
L-T-P-C – 2-0-0-2	Credit Units: 02
	Scheme of Evaluation: T

Objective:

The objectives of the course are to provide learning environment to practice listening, speaking, reading and writing skills, to assist the students to carry on the tasks and activities through guided instructions and materials and to effectively integrate English language learning with employability skills and training.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the various forms of communication	BT 1
CO 2	Understand basic proficiency in English.	BT 2
CO 3	Develop reading and listening comprehension, writing and speaking skills.	BT 3
CO 4	Analyze the type of communication	BT 4

Detailed Syllabus:

Modules	Topics	Course content	Hours
I	Vocabulary Building	The concept of Word Formation, Root words from foreign languages and their use in English, Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives, Synonyms, antonyms, and standard abbreviations.	10
II	Basic Writing Skills	Sentence Structures, Use of phrases and clauses in sentences, Importance of proper punctuation, creating coherence, organizing principles of paragraphs in documents, Techniques for writing precisely, Subject-verb agreement, Noun-pronoun agreement, Misplaced modifiers, Articles, Prepositions, Redundancies, Clichés	10
III	Writing Practices	Nature and Style of sensible Writing, Describing, Defining 1.3. Classifying, providing examples or evidence, Writing introduction and conclusion, Comprehension, Précis Writing, Essay Writing.	10
IV	Oral Communication	Listening Comprehension, Pronunciation, Intonation, Stress and Rhythm, Common Everyday Situations: Conversations and Dialogues, Communication at Workplace, Interviews, Formal Presentations	10

2. NPTEL Course on English Language for Competitive Exams by Prof. by Aysha Iqbal, IIT, Madras
3. NPTEL Course on Technical English for Engineers by Prof. by Aysha Iqbal, IIT, Madras

Paper VI/Subject Name: Design Thinking**Subject Code: DES022S206 (MC)****L-T-P-C – 0-0-2-1****Credit Units: 01****Scheme of Evaluation: P****Objective:**

The objectives of the course are to provide the students with new ways of creative thinking and learn the innovation cycle of Design Thinking process for developing innovative products which are useful for a student in preparing for an engineering career.

Prerequisites: None**Course Outcomes:**

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Tell the utility of design thinking	BT 1
CO 2	Compare and classify the various learning styles and memory techniques	BT 2
CO 3	Develop new ways of creative thinking and learn the innovation cycle of Design Thinking process for developing innovative products	BT 3
CO 4	Analyze emotional experience and inspect emotional expressions to better understand users while designing innovative products	BT 4

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Insight to Learning, Remembering Memory and Emotions	Understanding the Learning Process, Kolb's Learning Styles, Assessing and Interpreting. Understanding the Memory process, Problems in retention, Memory enhancement techniques. Understanding Emotions: Experience & Expression, Assessing Empathy, Application with Peers	05
II.	Basis of Design Thinking	Definition of Design Thinking, Need for Design Thinking, Objective of Design Thinking, Concepts & Brainstorming, Stages of Design Thinking Process (explain with examples) – Empathize, Define, Ideate, Prototype, Test. Understanding Creative thinking process, Understanding Problem Solving, Testing Creative Problem Solving	05
III.	Process of Prototype Design & Testing	Process of Engineering Product Design, Design Thinking Approach, Stages of Product Design, Examples of best product designs and functions, Assignment – Engineering Product Design. What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, Sample Example, Test Group Marketing. Understanding Individual differences & Uniqueness, Group Discussion and Activities to encourage the understanding, acceptance and appreciation of Individual differences.	06
IV	Customer-Centric Design, Feedback, Re-	Practical Examples of Customer Challenges, Use of Design Thinking to Enhance Customer Experience, Parameters of Product experience, Alignment of Customer Expectations with Product Design. Feedback loop, Focus on User Experience, Address “ergonomic challenges, User focused design, rapid prototyping &	06

	Design & Re-Create	testing, final product, Final Presentation – “Solving Practical Engineering Problem through Innovative Product Design & Creative Solution”

Paper VII/Subject Name: IDEA Lab Workshop

Subject Code: MEE022S217 (MC)

L-T-P-C – 0-0-2-1

Credit Units: 01

Scheme of Evaluation: P

Objective:

The objectives of the course are to spread the culture of innovation among students, & other stakeholders, to motivate students to ideate and pursue creativity and to train students to become imaginative, creative, and capable of converting their ideas into prototypes.

Prerequisites: None

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Label the basic technologies used for innovate	BT 1
CO 2	Understand and use tools for designing electronic systems, including schematic design, PCB layout, and documentation.	BT 2
CO 3	Apply advanced prototyping technologies, including Arduino and Raspberry Pi programming, power supply design, and 3D printing	BT 3
CO4	Analyze the tools taught	BT 4

Detailed Syllabus:

The theory component will include the following:

- Electronic component familiarization, Understanding electronic system design flow. Schematic design and PCB layout and Gerber creation using EagleCAD. Documentation using Doxygen, Google Docs, Overleaf. Version control tools - GIT and GitHub.
- Basic 2D and 3D designing using CAD tools such as FreeCAD, Sketchup, Prusa Slicer, FlatCAM, Inkspace, OpenBSP and VeriCUT.
- Introduction to basic hand tools - Tape measure, combination square, Vernier calliper, hammers, fasteners, wrenches, pliers, saws, tube cutter, chisels, vice and clamps, tapping and threading. Adhesives
- Introduction to Power tools: Power saws, band saw, jigsaw, angle grinder, belt sander, bench grinder, rotary tools. Various types of drill bits
- Familiarization and use of basic measurement instruments - DSO including various triggering modes, DSO probes, DMM, LCR bridge, Signal and function generator. Logic analyzer and MSO. Bench power supply (with 4-wire output)
- Circuit prototyping using (a) breadboard, (b) Zero PCB (c) 'Manhattan' style and (d) custom PCB. Single, double and multilayer PCBs. Single and double-sided PCB prototype fabrication in the lab. Soldering using soldering iron/station. Soldering using a temperature controlled reflow oven. Automated circuit assembly and soldering using pick and place machines.
- Mechanical cutting processes - 3-axis CNC routing, basic turning, milling, drilling and grinding operations, Laser cutting, Laser engraving etc. Basic welding and brazing and other joining techniques for assembly. Concept of Lab aboard a Box.
- Electronic circuit building blocks including common sensors. Arduino and Raspberry Pi programming and use. Digital Input and output. Measuring time and events. PWM. Serial communication. Analog input. Interrupts programming. Power Supply design (Linear and Switching types), Wireless power supply, USB PD, Solar panels, Battery types and charging.
- 3D printing and prototyping technology – 3D printing using FDM, SLS and SLA. Basics of 3D scanning, point cloud data generation for reverse engineering. Prototyping using subtractive

cutting processes. 2D and 3D Structures for prototype building using Laser cutter and CNC routers. Basics of IPR and patents; Accessing and utilizing patent information in IDEA Lab

Total Lab Hours for the semester = 22 (2 hours per week)

Minimum 08 Laboratory experiments based on the following-

1. Schematic and PCB layout design of a suitable circuit, fabrication and testing of the circuit.
2. Machining of 3D geometry on soft material such as soft wood or modelling wax.
3. 3D scanning of computer mouse geometry surface. 3D printing of scanned geometry using FDM or SLA printer.
4. 2D profile cutting of press fit box/casing in acrylic (3 or 6mm thickness)/cardboard, MDF (2 mm) board using laser cutter & engraver.
5. 2D profile cutting on plywood /MDF (6-12 mm) for press fit designs.
6. Familiarity and use of welding equipment.
7. Familiarity and use of normal and wood lathe.
8. Embedded programming using Arduino and/or Raspberry Pi.
9. Design and implementation of a capstone project involving embedded hardware, software and machined or 3D printed enclosure.

SEMESTER -III

DETAILED SYLLABUS OF 3rd SEMESTER

Paper I/Subject Name: Engineering and Solid Mechanics

Subject Code: CEE022C206

L-T-P-C – 3-0-0-3

Credit Units: 03

Scheme of Evaluation: T

Objective:

The objective of this Course is to introduce to continuum mechanics and material modelling of engineering materials based on first energy principles: deformation and strain; momentum balance, stress and stress states; elasticity and elasticity bounds; plasticity and yield design

Prerequisites: Physics and Mathematics

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the concepts of stress and strain	BT 1
CO 2	Understand the concepts of bending moment and shear stress and develop BM and SF diagrams	BT 2
CO 3	Apply concept of bending moment to calculate bending stress, section modulus	BT 3
CO 4	Apply concept of shear stress and and torsion to calculate stresses	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
I.	Stresses and Strains	<p>Concept of stress and strain, St. Venant's principle, stress and strain diagram, Elasticity and plasticity – Types of stresses and strains, Hooke's law – stress – strain diagram for mild steel – Working stress – Factor of safety – Lateral strain, Poisson's ratio and volumetric strain – Elastic moduli and the relationship between them – Bars of varying section – composite bars – Temperature stresses. Strain Energy – Resilience – Gradual, sudden, impact and shock loadings – simple applications.</p> <p>Compound Stresses and Strains- Two-dimensional system, stress at a point on a plane, principal stresses and principal planes, Mohr circle of stress, ellipse of stress and their applications. Two-dimensional stress-strain system, principal strains and principal axis of strain, circle of strain and ellipse of strain. Relationship between elastic constants.</p>	12
II.	Bending moment and Shear Force Diagrams	<p>Bending moment (BM) and shear force (SF) diagrams. BM and SF diagrams for cantilevers simply supported and fixed beams with or without overhangs. Calculation of maximum BM and SF and the point of contra flexure under concentrated loads, uniformly distributed loads over the whole span or part of span, combination of concentrated loads (two or three) and uniformly distributed loads, uniformly varying loads, application of moments.</p>	11
III.	Flexural Stresses-Theory of simple bending	<p>– Assumptions – Derivation of bending equation: $M/I = f/y = E/R$ - Neutral axis – Determination of bending stresses – Section modulus of rectangular and circular sections (Solid and Hollow), I, T, Angle and Channel sections – Design of simple beam sections.</p>	12
IV.	Shear Stresses and Torsion	<p>Shear Stresses- Derivation of formula – Shear stress distribution across various beam sections like rectangular, circular, triangular, I, T angle sections. Torsion- Derivation of torsion equation and its assumptions. Applications of the equation of the hollow and solid circular shafts, torsional rigidity, Combined torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion. Analysis of close-coiled-helical springs.</p>	10

Paper I/Subject Name: Engineering and Solid Mechanics Lab

Subject Code: CEE022C206

L-T-P-C – 0-0-2-2

Credit Units: 01

Scheme of Evaluation: Lab

List of Experiments:

1. Tension test
2. Bending tests on simply supported beam and Cantilever beam.
3. Compression test on concrete
4. Impact test
5. Shear test
6. Investigation of Hook's law that is the proportional relation between force and stretching in elastic deformation,
7. Determination of torsion and deflection,
8. Measurement of forces on supports in statically determinate beam,
9. Determination of shear forces in beams,
10. Determination of bending moments in beams,
11. Measurement of deflections in statically determinate beam,
12. Measurement of strain in a bar
13. Bend test steel bar;
14. Yield/tensile strength of steel bar;

Paper I/Subject Name: Civil Engineering Material Testing & Evaluation
CEE022C202

Subject Code:

L-T-P-C – 1-0-2-2

Credit Units: 02

Scheme of

Evaluation: TP

Objective:

The objective of this course is to deal with an experimental determination and evaluation of mechanical characteristics and advanced behavior of metallic and non-metallic structural materials. The course deals with explanation of deformation and fracture behavior of structural materials. The main goal of this course is to provide students with all information concerning principle, way of measurement, as well as practical application of mechanical characteristics

Prerequisites: Basic knowledge of mathematics, physics, materials science, mechanics of solids, chemistry, and common testing methods.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define and learn the Basic Properties of Materials	BT 1

CO 2	Interpret the different Engineering Materials considerations	BT 2
CO 3	To apply new techniques used in construction.	BT 3
CO 4	Analyze the engineering properties of Civil Engineering materials like aggregate, cement, concrete, steel, wood, plastic, paints, and other materials.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
I.	Basic Properties of Materials	Importance of materials in civil engineering construction; properties of materials- temperature, energy, specific heat, thermal conductivity, coefficient of thermal expansion; mechanical properties of metals- stress, strain, modulus of elasticity, elastic and plastic deformations, ductility, resilience and toughness, compressive, shear and torsional deformation, hardness; variability of material properties. aromaticity. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures.	8
II.	Introduction to Engineering Materials	Bricks, concrete blocks, Cements, Mortar, Aggregates, Pozzolanas, Concrete (plain, reinforced), Bitumen and asphaltic materials, floor and roofing tiles, Wood and wood product, Engineered wood products, Glass, glass fibres, glass wool, Plastics, Paints and Varnishes.	7
III.	New Techniques in Constructions	Introduction, 3D printing, photo catalytic admixture, self-healing concrete, zero cement concrete, hemp lime, wood-glass epoxy composites, bamboo, Composite Materials: FRC, steel/concrete composite bridge decks, fiber reinforced plastics and structural insulated panels.	7
IV.	Introduction to Material Testing	Mechanical behavior and mechanical characteristics; Elasticity – principle and characteristics; Plastic deformation of metals; Tensile test – standards for different material (brittle, quasi- brittle, elastic and so on) True stress – strain interpretation of tensile test; hardness tests; Bending and torsion test; strength of ceramic; Internal friction, creep – fundamentals and characteristics; Brittle fracture of steel – temperature transition approach; Background of fracture mechanics; Discussion of fracture toughness testing – different materials; concept of fatigue of materials; Structural integrity assessment procedure and fracture mechanics	8
TOTAL			30

Civil Engineering Material Testing & Evaluation Lab Syllabus

Total Lab Hours for the semester = 20 (2 hours per week)

Minimum 10 Laboratory experiments based on the following-

1. Gradation of coarse and fine aggregates
2. Different corresponding tests & need/application of these tests in design and quality control
3. Tensile Strength of materials & concrete composites
4. Compressive strength test on aggregates
5. Tension I - Elastic Behaviour of metals & materials
6. Tension II - Failure of Common Materials
7. Direct Shear - Frictional Behaviour
8. Concrete I - Early Age Properties
9. Concrete II - Compression and Indirect Tension
10. Compression – Directionality
11. Soil Classification
12. Consolidation and Strength Tests
13. Tension III - Heat Treatment
14. Torsion test
15. Hardness tests (Brinell's and Rockwell)
16. Tests on closely coiled & open coiled springs
17. Theories of Failure and Corroboration with Experiments
18. Tests on unmodified bitumen and modified binders with polymers
19. Bituminous Mix Design and Tests on bituminous mixes - Marshall method
20. Concrete Mix Design as per BIS

Paper I/Subject Name: Building Planning & CAD	Subject Code: CEE022C303
L-T-P-C – 2-0-2-3	Credit Units: 03
	Scheme of Evaluation: TP

Objective:

The objective of this course is to equip students with the knowledge and skills necessary to effectively plan, design, and implement various aspects of building construction and services. Students will learn to apply principles of building planning, create detailed construction drawings, and manage essential building services.

Prerequisites: Engineering Graphics & Design and Basic Computer

Course Outcomes

On successful completion of the course the students will be able to:		
No	SI Course Outcome	Blooms Taxonomy Level
CO 1	Define drafting commands of AutoCAD.	BT 1
CO 2	Explain the concept of the built environment and apply principles from the National Building Code and green building standards to the planning and design of residential and public buildings.	BT 2
CO 3	Develop the ability to prepare detailed construction drawings, including plans, elevations, sections, and site plans, for various types of buildings such as residential, educational, healthcare, and entertainment structures.	BT 3
CO 4	Examine efficient water supply, drainage, and solid waste management systems for different building types, incorporating sustainable practices like wet and dry waste segregation and vermi-composting.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
----------------	---------------	-----------------------	----------------

I.	Principles of Residential and Public Buildings	Concept of built environment and its application in planning. Recommendation of National building code., Green building, Introduction-Benefits, National priorities, rating system, check list, Site selection and planning, Water efficiency, Energy efficiency, Materials, Indoor environmental quality, Innovation and design process.	8
II.	Planning of Building	Preparation of constructional details and drawings-plan, elevation, section, site plan, foundation plan, terrace plan, waterproofing treatment, typical door and window. Planning of building such as <ul style="list-style-type: none"> • Residential building –Load bearing structure, RCC framed structure. Building for Education – school, college. Library • Building for health –Dispensary, Hospital Industrial structure • Building for entertainment-Theatre, club house, sports club. Other structure - Office, Hostel, Guest house. 	7
III.	Building's Water Supply and Drainage & Solid Waste Collection and Disposal System.	Design of water supply, waste water and storm water collection system for various types of buildings. Pumps and Pump House. Wet and dry solid waste segregation, Vermicomposting etc. Provision of Chutes. Accessibility in public Sanitation Systems.	7

IV.	Fire Protection System Elevators Heating Ventilation and Air Conditioning Building Management System	Fire Protection System: -Introduction, Fire protection, requirement of water quantity estimation. Systems of firefighting external and internal. Wet and dry risers, smoke alarm, Sprinkler system. Safety corridors in High-rise structures. Elevators: -Introduction, types of elevators. Essential features of lifts its size and requirement of minimum numbers, norms for safety doors, Operation and maintenance, Safety norms. Control systems, electrical requirement, and generator back-up, Escalators in Industry and in malls-multiplex. Design of Accessible Circulation System for differently abled publics. Heating Ventilation and Air Conditioning: - Ventilation, functional requirement, Heat balance system of ventilation, General rules and regulations in artificial ventilation system, Central air conditioning: - ducting and glass claddings. Operation and maintenance Building Management System: -Security Guard's Cabin, Postage collection boxes, Parking space.	8
TOTAL			30

Building Planning and Computer Aided Civil Engineering Drawings Lab Syllabus

Total Lab Hours for the semester = 30 (2 hours per week)

Minimum 5 Laboratory based on the following-

1. Preparation of detailed constructional plan of a residential building.
2. Preparation of front elevation, detailed sectional view, site plan, foundation plan, terrace plan, waterproofing treatment, typical door and window.
3. Concept of perspective drawing- one point, two-point, three point and uses.
 - **Preparation of line plans of various public buildings like: Building for Education – School, College. Library**

- **Building for health –Dispensary, Hospital Industrial structure Building for entertainment-** Theatre, Club House, Sports Club. Other Structure- Office, Hostel, Guest house.

4. Prepare layout for water supply and drainage for a residential building and for multistoried buildings.
5. Building's Solid Waste Collection and disposal system: Wet and dry solid waste segregation, Vermi-composting etc. Provision of Chutes.
6. Fire Protection System: Design of emergency exits and emergency vehicle routes with fire protection symbols

Paper I/Subject Name: Concrete Technology	Subject Code: CEE022C305 (B.TECH)
L-T-P-C – 2-0-2-3	Credit Units: 03
	Scheme of Evaluation: TP

Objective:

To understand the fundamentals of concrete and its ingredients and to be able to design and concrete mixes of different grades

Prerequisites: Concepts of +2 level Physics

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the functional role of all ingredients of concrete and their use for normal and special purpose concrete.	BT 1
CO 2	Apply the principle of sustainability for the utilization of waste, novel and innovative materials for use in concrete.	BT 2
CO 3	Formulate concrete mix for normal and special purpose concrete.	BT 3
CO 4	4. Use of various non-destructive testing procedure for evaluation of concrete properties.	BT 4

Detailed Syllabus:

Module s	Topics	Course Content	Periods
I.	<i>Properties of ingredients</i>	Properties of coarse and fine aggregates and their influence on concrete, types of cement and their use, Grades of ordinary Portland cement, Portland pozzolana cement, rapid hardening Portland cement, hydrophobic cement, low heat Portland cement and sulphate resisting Portland cement as per relevant I.S. codes. Types of aggregates and their properties. Testing of aggregates as per relevant IS Codes.	8

	Properties of different types of concrete	Concrete for structural work, light weight concrete, high density concrete, biological concrete, workability, durability and strength requirements, effect of w/c ratio on properties of fresh and hardened concrete, acceptability criteria, laboratory testing of fresh and hardened concrete, Fire resistant properties of hardened concrete.	
II.	Concreting methods	Process of manufacturing of concrete, transportation, placing, compaction and curing of concrete. Extreme weather concreting, special concreting methods, vacuum dewatering–underwater concrete, special form work., Plum Concrete, Self-Compacting Concrete	7
	Admixtures	Plasticizers, Retarders, Accelerators and other Admixtures, Test on Admixtures, Chemistry and Compatibility with concrete. GGBS fly Ash, Metakaolin, Silica Fumes, crush sand,	
III.	Ready mix concrete	Requirements of ready-mix concrete, properties of RMC, transit mixer details, Automation, instrumentation and Layout of RMC plant.	8
	Concrete mix design	Mix Design for compressive strength by I.S. methods, road note method, British method, ACI Method, Mix design for flexural strength.	
IV.	Concrete for repairs and rehabilitation of structures	High Performance concrete, Polymer Concrete, Fiber Reinforced Concrete, Light weight concrete and its manufacture, Polymer Impregnated Cement Concrete, Polymer Modified cement concrete and Ferro Cement, Special Tests for concrete used for repairs and rehabilitation	7
	Non-destructive testing of concrete	Rebound hammer test, Ultrasonic pulse velocity test, Magnetic particle testing, Liquid penetration testing, Visual testing, Laser Testing methods, Leak Testing, Impact echo test, carbonation test, Half cell potentiometer and corrosion of steel, Core test and relevant provisions of I.S. codes.

---------------------------	---------------	-----------------------	----------------

I.	Basic concepts of vector calculus	Scalar and vector point function, differential operator, gradient, directional derivative, physical meaning of gradient, divergence, curl and Laplacian with their properties. Line Integrals, Surface Integral, Volume integral, Green's theorem, Gauss' theorem and Stoke's theorem & its applications.	18
II.	Fourier series and partial differential equation	Definition of Fourier series, Orthogonal and orthonormal functions Fourier series with arbitrary period, in particular periodic function with period 2π Fourier series of even and odd function Half range Fourier series. Second order PDE of mathematical physics (Heat, wave and Laplace equation, one dimensional with standard boundary conditions) Solution by separation of variable method using Fourier series.	18
III.	Laplace transforms and applications	Introduction, Definition of the Laplace transform, Useful properties of Laplace transform (without proof): Linearity, First shifting theorem, Multiplication and division by t , transforms of derivatives and integrals, Heaviside unit step function, Dirac's delta function, second shifting theorem, Laplace transform of Periodic function. Inverse Laplace transform using partial fraction and Convolution theorem (without proof). Application to solve initial and boundary value problem involving ordinary differential equations with one dependent and constant coefficient.	18
IV.	Matrices	Eigen values Eigen vectors of square matrix, Cayley Hamilton's theorem and function of square matrix, Diagonalization of square matrix. Minimal Polynomial and Minimal Equation of a Matrix. Derogatory and Non-Derogatory Matrices.	18

Subject Name: Civil Engineering – Societal & Global Impact

Subject Code: CEE022S307 (MC)

L-T-P-C – 2-1-0-3

Credit Units: 03

Scheme of Evaluation: TP

Objective:

The course aims to help students understand the broad impact of civil engineering on society and the global stage. Civil engineering projects affect infrastructure, energy use, sustainability, employment, economic growth, and quality of life. Civil engineers must be aware of these impacts and take measures to ensure their work benefits society and the environment.

Prerequisites: NIL

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define the development of civil engineering over time and its impact on society, focusing on key innovations and their role in sustainability.	BT 1
CO 2	Understand the principles of sustainable infrastructure, including energy, water, and transportation systems.	BT 2
CO 3	Apply sustainable techniques in waste management, pollution control, and construction to address modern engineering challenges.	BT 3
CO 4	Analyze these concepts to independently solve the global problems	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
I.	Foundations of civil engineering	Overview of course and historical background, Pre-industrial revolution days, Agricultural revolution, first and second industrial revolutions, IT revolution: major civil engineering breakthroughs and innovations, Present-day world and future projections: Global warming, Ecosystems, sustainability, Evaluating future resource requirements, GIS and applications for monitoring systems, Human Development Index and ecological footprint: India vs. other countries	12
II.	Global development	Civil engineering- past, present, and future, Importance of civil engineering in global development, Ancient and modern marvels in civil engineering, Future vision for civil engineering: Smart cities, megacities, and futuristic visions for sustainable urbanization.	10
III.	Infrastructure development and sustainability	Habitats, megacities, smart cities, Transportation systems (Roads, Railways, Airports, Seaports, Tunnels), Energy generation systems: Hydro, Solar, Wind, Geothermal, Tidal water provisioning and telecommunication needs, Codes & Standards in infrastructure development, Innovations for sustainable Infrastructure	10
IV.	Environmental engineering and sustainability practices	Solid waste management, Water purification, Wastewater treatment, Flood control systems, Global warming phenomena, Pollution mitigation, Metrics and monitoring environmental impacts, Sustainability in built environments: LEED ratings, Climate control, Smart buildings, Civil Engineering projects: Environmental impact analysis, Waste reduction, GHG emission reduction, Project management and sustainability practices	13

SEMESTER -IV

Paper I/Subject Name: Structural Analysis

Subject Code: CEE022C206

L-T-P-C – 3-0-0-3

Credit Units: 03

Scheme of Evaluation: T

Objective:

The objective of the course is to provide students with a comprehensive understanding of the fundamental principles and methods of structural analysis. The course aims to develop their ability to apply analytical techniques for determining internal forces, and deflections in structures under various loading conditions. Through the study of beams, columns, trusses, arches, suspension bridges students will be prepared to analyze and design real-world structural systems.

Prerequisites: Solid mechanics

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Define structure types, loads, and basic theorems in structural analysis	BT 1
CO 2	Understand buckling concepts and theories for struts and columns	BT 2
CO 3	Apply influence lines to analyze beams, trusses, arches, and suspension bridges	BT 3
CO 4	Analyze indeterminate structures using stiffness and flexibility methods.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
----------------	---------------	-----------------------	----------------

I.	General theorems of structural analysis	<p>Different types of structures, Loads on the structural system, static and kinematic indeterminacy, methods of analysis - equilibrium equations, compatibility requirements, introduction to force and displacement methods, energy methods - strain energy, principle of virtual work, Maxwell-Betti's reciprocal theorem, Castigliano's theorem, unit load method.</p> <p>Deflection of determinate beams, pin jointed trusses, and rigid jointed frames and various methods for calculation of deflection - double integration (Macaulay's) method, moment area method, conjugate beam method, principle of virtual work method and Castigliano's theorems.</p>	12
II.	Column, and Struts	<p>Struts subjected to axial loads, concept of buckling. Euler's buckling theory of struts with different boundary conditions. Rankine's buckling theory for columns. Struts subjected to eccentric and lateral loads and struts with initial curvature.</p>	11
III.	Moving loads and Influence lines	<p>Concepts of influence lines-ILD for reactions, SF and BM for determinate beams-ILD for axial forces in determinate trusses, Reactions, BM and SF in determinate beams using rolling loads concepts.</p> <p>Arches: Types of Arches, determination of normal thrust, radial shear and bending moment. Influence lines for normal thrust, shear force and bending moment for three hinged parabolic arch.</p> <p>Cables and Suspension bridges: cables with three hinged stiffening girders. ILD for three hinged stiffening girders.</p>	12
IV.	Stiffness and flexibility methods of structural analysis	<p>Flexibility coefficients and their use in the formulation of compatibility equations. Application of Castigliano's theorem of least work to propped cantilevers, fixed beams, continuous beams, simple pin jointed frames including effect of lack of fit of members, simple rigid jointed frames and two hinged arch.</p> <p>Stiffness coefficients and their use for formulation of equilibrium equation, direct stiffness method, slope deflection method, moment distribution method, applications of these methods to indeterminate beams, simple rigid jointed frames and rigid jointed frames with inclined members, including the effect of settlement/rotation of supports.</p>	10

Subject Name: Hydraulic Engineering	Subject Code: MAT022C102 (BSC)
L-T-P-C – 3-0-2-4	Credit Units: 04
	Scheme of Evaluation: T

Objective:

To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines. At the completion of the course, the student should be able to relate the theory and practice of problems in hydraulic engineering

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	• Understand and analyze fluid flow behavior in pipes and open channels, including laminar and turbulent flow characteristics, boundary layer concepts, and flow measurement techniques.	BT 1
CO 2	• Apply principles of dimensional analysis and similitude for hydraulic modeling and solve problems related to fluid flow using appropriate theoretical and empirical methods.	BT 2
CO 3	• Evaluate uniform and non-uniform flow conditions in open channels, including flow classification, hydraulic jump phenomena, and energy and momentum principles.	BT 3

CO 4	<ul style="list-style-type: none"> • Design and analyze pipe networks, hydraulic structures, and flow control devices, and utilize computational tools to simulate fluid flow and optimize water resource systems. 	BT 4 & 5
------	---	----------

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Fundamentals of Soil Mechanics and Soil Properties	Laminar flow through circular pipes, annulus, and parallel plates, Stoke's law, measurement of viscosity, Reynolds experiment, transition from laminar to turbulent flow, definition of turbulence, scale and intensity of turbulence, causes of turbulence, instability and mechanism of turbulence, effect of turbulent flow in pipes, Reynolds stresses, semi-empirical theories of turbulence, Prandtl's mixing length theory, universal velocity distribution equation, resistance to flow of fluid in smooth and rough pipes, Moody's diagram.	16
II.	Boundary Layer Theory and Dimensional Analysis	Assumption and concept of boundary layer theory, boundary-layer thickness, displacement thickness, momentum thickness, energy thickness, laminar and turbulent boundary layers on a flat plate, laminar sub-layer, smooth and rough boundaries, local and average friction coefficients, separation and control of boundary layers, dimensional homogeneity, Rayleigh method, Buckingham's Pi method and other methods, dimensionless groups, similitude, model studies, types of models, application of dimensional analysis and model studies to fluid flow problems.	17
III.	Open Channel Flow and Hydraulic Phenomena	Introduction to open channel flow, comparison between open channel flow and pipe flow, geometrical parameters of a channel, classification of open channels, classification of open channel flow, velocity distribution of channel section, uniform flow including continuity equation, energy equation, momentum equation, characteristics of uniform flow, Chezy's formula, Manning's formula, factors affecting Manning's roughness coefficient, most economical section of channel, computation of uniform flow and normal depth, non-uniform flow concepts such as specific energy, specific energy curve, critical flow, discharge curve, specific force, specific depth and critical depth, channel transitions, measurement of discharge and velocity using Venturi flume, standing wave flume, Parshall flume, broad crested weir, measurement of velocity by current meter, floats, hot-wire anemometer, gradually varied flow, dynamic equation of gradually varied flow, classification of channel bottom slopes and surface profiles, characteristics of surface profiles, computation of water surface profile by graphical, numerical and analytical methods including direct step, graphical integration and direct integration methods.	16
IV	Hydraulic Jumps, Flow through Pipes, and Computational Fluid Dynamics	Theory of hydraulic jump, elements and characteristics of hydraulic jump in a rectangular channel, length and height of jump, location of jump, types, applications and location of hydraulic jump, energy dissipation and other uses, surge as a moving hydraulic jump, positive and negative surges, dynamics of fluid flow including momentum principle and applications such as force on plates and pipe bends, moments of momentum equation, flow through pipes including loss of head through pipes, Darcy-Weisbach equation, minor losses, total energy equation, hydraulic gradient line, pipes in series, equivalent pipes, pipes in parallel, flow through laterals,	

		flows in dead end pipes, siphon, power transmission through pipes, nozzles, analysis of pipe networks including Hardy Cross method, water hammer in pipes and control measures, branching of pipes, three reservoir problem, computational fluid dynamics basics including basic equations of fluid dynamics, grid generation, introduction to inviscid incompressible flow, boundary layer flow as applicable to CFD, hydroinformatics concepts and scope of internet and web-based modeling in water resources engineering.

Paper I/Subject Name: Transportation Engineering

Subject Code: CEE022C403 (B.TECH)

L-T-P-C – 2-0-2-3

Credit Units: 03

Scheme of Evaluation: TP

Objective:

To understand the importance of transportation and characteristics of road transport and know about the history of highway development, surveys and classification of roads. The course is designed to impart knowledge about the geometric design of highways, traffic characteristics and pavement materials

Prerequisites: Concepts of +2 level Physics

Course Outcomes

On successful completion of the course the students will be able to:		
No	SI Course Outcome	Blooms Taxonomy Level
CO 1	Explain various engineering surveys for highways.	BT 1
CO 2	Illustrate tests on highway materials.	BT 2
CO 3	Understand geometric design and alignment concepts.	BT 3
CO 4	Emphasize the importance of traffic volume studies and traffic regulation.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
I.	Highway development and planning	Highway development and planning-Classification of roads, road development in India, Current Road projects in India; highway alignment and project preparation.	8

	Geometric design of highways	Geometric design of highways-: Introduction; highway cross section elements; sight distance, design of horizontal alignment; design of vertical alignment; design of intersections, problems.	
II.	Accessibility to Differently Abled Publics.	Design of Access Routes & Walkways (Elements of walkways, Tactile Navigation Systems, BRT Systems, Pedestrian streets and other related aspects), Accessible Streets and Mobility Environments (Street Elements for Accessibility, dimensions and codes material, TGSIs), Inclusive Public Transportation System	7
	Traffic engineering & control.	Traffic Characteristics, traffic engineering studies, traffic flow and capacity, traffic regulation and control; design of road intersections; design of parking facilities; highway lighting; problems	
III.	Pavement materials	Materials used in Highway Construction- Soils, Stone aggregates, bituminous binders, bituminous paving mixes; Portland cement and cement concrete: desirable properties, tests, requirements for different types of pavements. Problems	8
IV.	Design of pavements	Introduction; flexible pavements, factors affecting design and performance; stresses in flexible pavements; design of flexible pavements as per IRC; rigid pavements- components and functions; factors affecting design and performance of CC pavements; stresses in rigid pavements; design of concrete pavements as per IRC; problems	7
TOTAL			30

On completion of the course, the students will be able to:

- Carry out surveys involved in planning and highway alignment
- Design the geometric elements of highways and expressways
- Carry out traffic studies and implement traffic regulation and control measures and intersection design
- Characterize pavement materials and
- Design flexible and rigid pavements as per IRC

Transportation Engineering Lab Syllabus

Total Lab Hours for the semester = 30 (2 hours per week)

Minimum 10 Laboratory experiments based on the following-

Objective: To determine the various parameters of road building materials and understand their physical properties.

1. Sieve analysis
2. Impact test
3. Crushing Strength test
4. Abrasion test
5. Water Absorption test
6. Specific gravity test
7. Flakiness Index test
8. Elongation Index test
9. CBR Test

Paper I/Subject Name: Surveying and Geomatics Subject Code: CEE022C404 (B.TECH)

L-T-P-C – 3-0-2-4

Credit Units: 04

Scheme of Evaluation: TP

Objective:

The objective of this Course is to introduce students to the field of surveying as applied in civil engineering field. The course is also aimed at familiarizing students with various methods and instruments used for surveying.

Prerequisites: Concepts of +2 level Physics and Maths

Course Outcomes

On successful completion of the course the students will be able to:		
No	SI Course Outcome	Blooms Taxonomy Level
CO 1	Explain the basics of surveying, including accurate measurements, field booking, and plotting.	BT 1
CO 2	Demonstrate proficiency in using survey instruments and tools.	BT 2
CO 3	Understand the relevance of geospatial information in civil engineering projects	BT 3
CO 4	Analyze survey data for decision-making and Explore different methods for data collection and processing in geomatics.	BT 4

Detailed Syllabus:

Module s	Topics	Course Content	Periods
I.	<i>Introduction to Surveying</i>	Principles, Linear, angular and graphical methods, Survey stations, Survey lines- ranging, Bearing of survey lines, Levelling: Plane table surveying, Principles of levelling- booking and reducing levels; differential, reciprocal leveling, profile levelling and cross sectioning. Digital and Auto Level, Errors in levelling; contouring:	14

		Characteristics, methods, uses; areas and volumes.	
	<i>Triangulation and Trilateration</i>	Theodolite survey: Instruments, Measurement of horizontal and vertical angle; Horizontal and vertical control - methods -triangulation - network- Signals. Baseline - choices - instruments and accessories - extension of base lines - corrections - Satellite station - reduction to centre - Intervisibility of height and distances - Trigonometric leveling - Axis single corrections.	
II.	<i>Curves</i>	Elements of simple and compound curves – Method of setting out– Elements of Reverse curve - Transition curve – length of curve – Elements of transition curve - Vertical curves	14
	<i>Modern Field Survey Systems</i>	Principle of Electronic Distance Measurement, Modulation, Types of EDM instruments, Distomat, Total Station – Parts of a Total Station – Accessories –Advantages and Applications, Field Procedure for total station survey, Errors in Total Station Survey; Global Positioning Systems- Segments, GPS measurements, errors and biases, Surveying with GPS, Co-ordinate transformation, accuracy considerations.	
III.	<i>Photogrammetry Surveying</i>	Introduction, Basic concepts, perspective geometry of aerial photograph, relief and tilt displacements, terrestrial photogrammetry, flight planning; Stereoscopy, ground control extension for photographic mapping- aerial triangulation, radial triangulation, methods; photographic mapping- mapping using paper prints, mapping using stereoplotting instruments, mosaics, map substitutes.	8
IV.	<i>Remote Sensing</i>	Introduction –Electromagnetic Spectrum, interaction of electromagnetic radiation with the atmosphere and earth surface, remote sensing data acquisition: platforms and sensors; visual image interpretation; digital image processing.	9
TOTAL			45

On completion of the course, the students will be able to:

- Apply the knowledge, techniques, skills, and applicable tools of the discipline to engineering and surveying activities
- Translate the knowledge gained for the implementation of Civil infrastructure facilities

- Relate the knowledge on Surveying to the new frontiers of science like Hydrographic surveying, Electronic Distance Measurement, Global Positioning System, Photogrammetry and Remote Sensing.

Surveying and Geomatics Lab Syllabus

Total Lab Hours for the semester = 30 (2 hours per week)

Minimum 10 Laboratory experiments based on the following-

Objective: To familiarize students with different surveying instruments and techniques like levelling, traversing, direct & indirect contouring etc.

1. To Range a line more than one chain length and recording details in a field book.
2. Open and Closed Traversing using a Prismatic compass.
3. To determine the height of a building (accessible and inaccessible) using a theodolite.
4. Profile and Cross-section levelling using a dumpy level.
5. Repetition and Reiteration method of horizontal angle measurement by theodolite.
6. To locate a simple circular curve on field.
7. Plane table surveying
8. Indirect Contouring
9. Determination of area of an irregular boundary.
10. Total Station Demonstration/ Workshop.

Subject Name: Construction Engineering & Management

Subject Code: CEE022C405

L-T-P-C – 3-0-0-3

Credit Units: 03

Scheme of Evaluation: T

Objective:

The objectives of the course are to acquaint the students with various aspects of Construction Engineering & Management. They'll gain insights into construction processes, stakeholder roles (including architects, engineers, contractors, and clients), and modern construction practices. Additionally, they'll learn about project dynamics, effective planning, cost optimization, contract administration, and the importance of strong communication skills within the construction industry.

Prerequisites: NIL

Course Outcomes

On successful completion of the course the students will be able to:		
No	SI Course Outcome	Blooms Taxonomy Level
CO 1	Define key concepts related to construction practices, project development, and stakeholder roles.	BT 1
CO 2	Explain modern construction practices, including techniques, materials, and safety protocols. Also be able to explain the dynamics of construction projects, such as the interplay between stakeholders, project objectives, and resource allocation	BT 2
CO 3	Apply knowledge by planning, controlling, and monitoring construction projects with respect to both time and cost. Will be able to put theoretical concepts into practical use during project execution.	BT 3
CO 4	Analyze construction projects from an economic perspective, considering costs, benefits, and optimization strategies. Also critically evaluate contract structures and address issues related to project administration.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
I.	<p>Basics of Construction Construction project planning</p>	<p>Basics of Construction- Unique features of construction, construction projects- types and features, phases of a project, agencies involved and their methods of execution.</p> <p>Construction project planning- Stages of project planning: pre-tender planning, pre-construction planning, detailed construction planning, role of client and contractor, level of detail. Process of development of plans and schedules, work break-down structure, activity lists, assessment of work content, concept of productivities, estimating durations, sequence of activities, activity utility data; Techniques of planning- Bar charts, Gantt Charts.</p> <p>Networks: basic terminology, types of precedence relationships, preparation of CPM networks: activity on link and activity on node representation, computation of float values, critical and semi critical paths, calendaring networks. PERT- Assumptions underlying PERT analysis, determining three time estimates, analysis, slack computations, calculation of probability of completion</p>	12
II.	<p>Construction Methods basics: Construction Equipment basics:</p>	<p>Construction Methods basics: Types of foundations and construction methods; Basics of Formwork and Staging; Common building construction methods (conventional walls and slabs; conventional framed structure with blockwork walls; Modular construction methods for repetitive works; Precast concrete construction methods; Basics of Slip forming for tall structures; Basic construction methods for steel structures; Basics of construction methods for Bridges.</p> <p>Construction Equipment basics: Conventional construction methods Vs Mechanized methods and advantages of latter; Equipment for Earthmoving, Dewatering; Concrete mixing, transporting & placing; Cranes, Hoists and other equipment for lifting; Equipment for transportation of materials. Equipment Productivities</p>	12

<p>III.</p>	<p>Planning and organizing construction site and resources- Project Monitoring & Control-</p>	<p>Planning and organizing construction site and resources- Site: site layout including enabling structures, developing site organization, Documentation at site; Manpower: planning, organizing, staffing, motivation; Materials: concepts of planning, procurement and inventory control; Equipment: basic concepts of planning and organizing; Funds: cash flow, sources of funds; Histograms and S-Curves. Earned Value; Resource Scheduling- Bar chart, line of balance technique, resource constraints and conflicts; resource aggregation, allocation, smoothening and leveling. Common Good Practices in Construction.</p> <p>Project Monitoring & Control- Supervision, record keeping, periodic progress reports, periodical progress meetings. Updating of plans: purpose, frequency and methods of updating. Common causes of time and cost overruns and corrective measures. Basics of Modern Project management systems such as Lean Construction; Use of Building Information Modelling (BIM) in project management; Quality control: concept of quality, quality of constructed structure, use of manuals and checklists for quality control, role of inspection, basics of statistical quality control. Safety, Health and Environment on project sites: accidents; their causes, effects and preventive measures, costs of accidents, occupational health problems in construction, organizing for safety and health.</p>	<p>11</p>
--------------------	--	---	------------------

IV.	Contracts Management basics: Construction Costs:	<p>Contracts Management basics: Importance of contracts; Types of Contracts, parties to a contract; Common contract clauses (Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price. Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations, Dispute Resolution methods.</p> <p>Construction Costs: Make-up of construction costs; Classification of costs, time- cost trade-off in construction projects, compression and decompression.</p>	10

Subject Name: Geotechnical Engineering	Subject Code: MAT022C102 (BSC)
L-T-P-C – 2-0-2-4	Credit Units: 04
	Scheme of Evaluation: T

Objective:

- To introduce the fundamental concepts of soil mechanics**, including soil formation, classification, and its physical and engineering properties relevant to civil engineering applications.
- To develop an understanding of the behavior of soils under various loading conditions**, including concepts of permeability, seepage, stress distribution, and consolidation.
- To equip students with the ability to determine the shear strength of soils**, enabling the analysis of slope stability, earth pressure, and bearing capacity problems.
- To provide hands-on experience in laboratory and field testing of soils**, interpreting test results for practical engineering applications in foundation design and site investigation.
- To prepare students to analyze and design shallow and deep foundations**, retaining structures, and other geotechnical systems with an understanding of soil-structure interaction.
- To foster awareness of modern tools and techniques in geotechnical investigations**, including geophysical methods, ground improvement techniques, and sustainable geotechnical solutions.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	• Apply the fundamental principles of soil mechanics to classify soils and analyze their physical and engineering properties relevant to civil engineering projects.	BT 1

CO 2	<ul style="list-style-type: none"> • Conduct laboratory and field tests to determine soil properties such as permeability, shear strength, compaction, and consolidation, and interpret the results for practical engineering applications. 	BT 2
CO 3	<ul style="list-style-type: none"> • Analyze stress distribution, seepage, and effective stress in soil masses, and assess their impact on soil stability and foundation performance. 	BT 3
CO 4	<ul style="list-style-type: none"> • Design safe and efficient shallow and deep foundation systems, retaining structures, and earthworks by integrating soil behavior analysis and modern geotechnical investigation techniques. 	BT 4 & 5

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Fundamentals of Soil Mechanics and Soil Properties	Introduction to types of soils, their formation and deposition, definitions of soil mechanics, soil engineering, rock mechanics, and geotechnical engineering, scope of soil engineering, comparison and difference between soil and rock, basic definitions and relationships including soil as a three-phase system in terms of weight, volume, voids ratio, and porosity, definitions of moisture content, unit weights, degree of saturation, voids ratio, porosity, specific gravity, mass specific gravity, relationships between volume weight, voids ratio and moisture content, unit weight and percent air voids, saturation and moisture content, moisture content and specific gravity, determination of various parameters such as moisture content by oven dry method, pycnometer, sand bath method, torsional balance method, nuclear method, alcohol method and sensors, specific gravity by density bottle method, pycnometer method, measuring flask method, unit weight by water displacement method, submerged weight method, core-cutter method, sand-replacement method.	16
II.	Soil Classification, Plasticity, and Permeability	Plasticity characteristics of soil including introduction to definitions such as plasticity of soil, consistency limits—liquid limit, plastic limit, shrinkage limit—plasticity, liquidity and consistency indices, flow and toughness indices, definitions of activity and sensitivity, determination of liquid limit, plastic limit and shrinkage limit, use of consistency limits, classification of soils with particle size classification, textural classification, unified soil classification system, Indian standard soil classification system, field identification of soils and general characteristics of soils in different groups, permeability of soil covering Darcy's law, validity of Darcy's law, determination of coefficient of permeability by laboratory methods such as constant-head and falling-head methods, field methods including pumping-in and pumping-out tests, permeability of stratified soils, factors affecting permeability of soil, seepage analysis including introduction to stream and potential functions, characteristics of flow nets, and graphical methods to plot flow nets.	17

III.	Soil Stresses, Compaction, and Consolidation	Effective stress principle including introduction, nature of effective stress, effect of water table, fluctuations of effective stress, effective stress in soils saturated by capillary action, seepage pressure, quick sand condition, compaction of soil covering introduction, theory of compaction, laboratory determination of optimum moisture content and maximum dry density, field compaction methods, compaction specifications and field control, stresses in soils including stresses due to point load, line load, strip load, uniformly loaded circular area, rectangular loaded area, influence factors, isobars, Boussinesq's equation, Newmark's influence chart, contact pressure under rigid and flexible area, computation of displacements from elastic theory, consolidation of soil including introduction, comparison between compaction and consolidation, initial, primary and secondary consolidation, spring analogy for primary consolidation, interpretation of consolidation test results, Terzaghi's theory of consolidation, final settlement of soil deposits, computation of consolidation settlement and secondary consolidation.	16
IV	Shear Strength, Slope Stability, and Soil Exploration	Shear strength covering Mohr circle and its characteristics, principal planes, relation between major and minor principal stresses, Mohr-Coulomb theory, types of shear tests including direct shear test, merits of direct shear test, triaxial compression tests, behavior of UU, CU and CD tests, pore-pressure measurement, computation of effective shear strength parameters, unconfined compression test, vane shear test, stability of slopes including introduction, types of slopes and their failure mechanisms, factor of safety, analysis of finite and infinite slopes, wedge failure, Swedish circle method, friction circle method, stability numbers and charts, soil exploration including introduction, methods of site exploration and soil investigation, methods of boring, soil samplers, sampling procedures, trial pits, borings, penetrometer tests, analysis of borehole logs, geophysical and advanced soil exploration methods.

SEMESTER – V

Subject Name: Design of RCC Structures

L-T-P-C – 3-1-0-4

Credit Units: 04

Subject Code: CEE022C501

Scheme of Evaluation: T

Objective:

The objective of the Design of Reinforced Cement Concrete (RCC) subject is to equip students with the knowledge and skills required to design safe, durable, and economical concrete structures. It focuses on understanding the properties of concrete and steel, applying design philosophies such as limit state and working stress methods, and designing structural elements like beams, slabs, columns, and footings. The course emphasizes the use of IS codes (especially IS 456:2000), ensures structural safety and serviceability, and teaches proper reinforcement detailing. It also prepares students to tackle practical site-related challenges and promotes the use of sustainable and cost-effective design practices.

Prerequisites: Knowledge of Strength of Materials, Structural Analysis, Engineering Mechanics, Construction Materials, and Mathematics is essential for studying RCC Design.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	To understand the concepts and assumptions behind Working Stress and Limit State Methods for RCC design.	BT 1
CO 2	To apply IS code provisions for the design of beams, slabs, columns, and footings using RCC design methods.	BT 2
CO 3	To analyze structural members for strength and serviceability under various loading conditions.	BT 3
CO 4	To create detailed design and reinforcement drawings of RCC and prestressed concrete components.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
I.	Working stress method and ultimate	Reinforced Concrete Fundamentals (working Stress Method): Concept of reinforced concrete, stress strain characteristics of concrete and steel reinforcement, elastic theory, singly reinforced, balanced section, under reinforced section and over reinforced section.	12

II.	Limit state method of design	Concepts of probability and reliability, characteristic loads, characteristic strength, partial safety factors for loads and materials, limit states of collapse in flexure, direct compression, shear, limit states of serviceability in deflection and cracking, design of singly and doubly reinforced rectangular and T sections for flexure, design of members in shear and bond, design of columns for axial load, uni-axial bending moment, and bi-axial bending moment as per IS Code.	12
III.	Limit state method of design	Design of one-way and two-way slabs, design of beams subjected to bending and torsion, design of isolated square and rectangular footings subjected to axial load and moments, design of combined foundations, design of doglegged and open-well type staircases, design of flat slab, design of post-tensioned slab.	11
IV.	Pre-stressed concrete	Basic principles of pre-stressed concrete: materials used and their properties, methods and systems of pre-stressing. Losses in pre-stress, analysis of various types of sections subjected to pre-stress and external loads. Prestressed and post tensioned members, Different types of Prestressed sections, BoxSection, Girder	10

Structural Design –I- Laboratory

Course Outcomes

After completion of this course, students will be able to,

1. Analyze and design beam, column, slab, foundation, staircases and cantilever and counterfort retaining walls.
2. Draw detailed structural drawings for slab, beam, column, foundation, staircases and cantilever and counterfort retaining walls.

Course Contents

1. Design and drawing of singly reinforced, doubly reinforced rectangular and T-section simply supported and continuous beam.
2. Design and drawing of one way, two way simply supported and continuous slab system.
3. Design and drawing of Dog-legged and open wall type staircases.
4. Design and drawing of columns and foundation.
5. Design and drawing of Retaining wall. (Cantilever and counterfort)

Subject Name: Environmental Engineering	Subject Code: CEE022C502
L-T-P-C – 3-0-2-3	Credit Units: 03
	Scheme of Evaluation: TP

Objective:

The objective of this course is to provide a comprehensive understanding of environmental engineering systems related to **water supply, wastewater, air, noise, and solid waste management**, along with associated infrastructure and regulatory frameworks. It covers sources and treatment of water, design of supply and sewerage systems, water quality standards, and wastewater treatment processes. The syllabus also includes air and noise pollution control, municipal and hazardous solid waste management, building plumbing systems, and the roles of government authorities in environmental regulation and infrastructure planning.

Prerequisites: Basic knowledge of chemistry, fluid mechanics, and environmental science is a prerequisite for studying Environmental Engineering.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	To understand the sources, quality parameters, and treatment methods of water and wastewater.	BT 1
CO 2	To apply design principles for water supply, sewerage, stormwater, and solid waste management systems.	BT 2
CO 3	To analyze the causes and impacts of air and noise pollution, and evaluate appropriate control measures.	BT 3
CO 4	To design integrated environmental engineering solutions considering plumbing, waste handling, and regulatory compliance.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
----------------	---------------	-----------------------	----------------

I.	Water Supply and Treatment	Topics include sources of water, water quality issues, water quality requirements for beneficial uses, water quality standards, water quality indices, and water safety plans. It also covers water supply systems, the need for planned water supply schemes, and water demand for domestic, industrial, and agricultural purposes. Additional topics include components of water supply systems, transmission of water, distribution systems, various valves used in water supply, service reservoirs and their design. Treatment processes include aeration, sedimentation, coagulation and flocculation, filtration, disinfection, and advanced treatment methods such as adsorption, ion exchange, and membrane processes.	12
II.	Wastewater Engineering	This module includes domestic and storm water, quantity of sewage, sewage flow variations, types and shapes of sewers, design parameters, operation and maintenance of sewers, sewage pumping, and sewerage systems. It also covers sewer appurtenances, design of sewerage systems, small bore systems, storm water quantification and design, sewage and sillage, and pollution due to improper sewage disposal. Further topics include National River Cleaning Plans, aerobic and anaerobic treatment systems, suspended and attached growth systems, sewage recycling, and quality requirements for various reuse purposes.	12
III.	Air and Noise Pollution	Topics covered include the composition and properties of air, quantification and monitoring of air pollutants, occupational and urban air pollution, automobile pollution, chemistry of combustion, automobile engines, fuel quality, and their operating conditions and interrelations. The module also addresses air quality standards, control measures for air pollution, and their limitations. It further includes basic concepts of noise pollution, noise measurement techniques, and noise control methods.	11

IV.	Solid Waste Management and Building Plumbing	This module covers municipal solid waste (MSW), its composition, chemical and physical parameters, and management processes including collection, transport, treatment, and disposal. It also includes special MSW from commercial establishments, construction sites, and biomedical sources. Topics on environmental effects of solid waste, health hazards, segregation, source reduction, recovery, recycling, and integrated solid waste management are also addressed. Hazardous waste types and classifications are included. The module concludes with building plumbing systems, plumbing in high-rise buildings, pressure reducing valves, break pressure tanks, storage tanks, building drainage, fixtures and fittings, and the role of government authorities in water supply, sewerage disposal, and environmental pollution control.	10

Subject Name: Engineering Economics, Estimation & Costing

Subject Code: CEE022C503

L-T-P-C – 3-0-2-3

Credit Units: 03

Scheme of Evaluation: TP

Objective:

The objective of this course is to provide students with a comprehensive understanding of engineering economics with a focus on its application in infrastructure and construction projects. It aims to equip learners with the ability to analyze and compare economic alternatives using techniques such as present worth, future worth, annual worth, benefit-cost ratio, life cycle costing, and breakeven analysis. The course also emphasizes understanding technical specifications, cost estimation, and rate analysis for various construction components. Additionally, it introduces

students to the concepts of competitive bidding and tender preparation, enabling them to evaluate project costs effectively and prepare economically sound proposals.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	To understand fundamental economic principles and their application in the Indian context, particularly for public and private sector projects.	BT 1
CO 2	To apply techniques such as present worth, future worth, annual worth, benefit-cost ratio, life cycle cost, and breakeven analysis for evaluating project alternatives.	BT 2
CO 3	To analyze technical specifications and quantify the cost components of a structure through material estimation and rate analysis.	BT 3
CO 4	To evaluate tendering procedures and prepare competitive bidding proposals for construction projects.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
I.	Fundamentals of Engineering Economics	Introduction to economics, importance of economics in engineering, economics of India, comparison between public sector and private sector, role of economics in infrastructure and construction projects.	12
II.	Time Value of Money and Financial Analysis	Perform and evaluate present worth, future worth, and annual worth analyses on one or more economic alternatives, carry out and evaluate benefit/cost analysis, life cycle cost analysis, breakeven analysis on one or more economic alternatives.	12
III.	Cost Evaluation and Technical Specifications	Understand the technical specifications for various works to be performed for a project, analyze how technical specifications impact the cost of a structure, quantify the worth of a structure by evaluating quantities of constituents, derive their cost rates, build up the overall cost of the structure.	11

IV.	Estimation, Bidding, and Project Costing	Understand how competitive bidding works, prepare and submit a competitive bid proposal, comprehend procedures of tendering and contracting, apply cost estimation techniques in real-world construction projects.	10

Term Work Assignments may include:

1. Deriving an approximate estimate for a multistoried building by approximate methods.
2. Detailed estimate for the following with the required material survey for the same.
 - a. Ground plus three storied RCC Framed structure building with blockwork walls
 - b. bridge with minimum 2 spans
 - c. factory building
 - d. road work
 - e. cross drainage work
 - f. Ground plus three storied building with load-bearing wallsg Cost of finishes, MEP works for (f) above
3. Preparation of valuation report in standard Government form.
4. Assignments on rate analysis, specifications and simple estimates.
5. Detailed estimate of minor structure.
6. Preparation of Bar bending schedule.

Subject Name: Hydrology and Water Resource Engineering

Subject Code: CEE022C504

L-T-P-C – 3-0-0-3

Credit Units: 03

Scheme of Evaluation: T

Objective:

The objective of this course is to provide students with a fundamental understanding of the hydrologic cycle and its components, including precipitation, evaporation, infiltration, runoff, and groundwater flow. It aims to equip students with analytical and design skills for planning and managing water resources systems such as reservoirs, canals, and flood control structures. The course also focuses on the application of hydrological models, data analysis techniques, and design methods in solving real-world problems related to water availability, distribution, and conservation.

Prerequisites: Basic knowledge of fluid mechanics and engineering mathematics.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	To understand the components of the hydrologic cycle and the fundamental processes such as precipitation, evaporation, infiltration, runoff, and groundwater flow.	BT 1
CO 2	To apply analytical methods and hydrologic techniques for estimation of surface and groundwater flow, irrigation requirements, and reservoir design.	BT 2
CO 3	To analyze rainfall-runoff relationships, hydrographs, and well hydraulics using standard methods such as SCS-CN, unit hydrograph, and aquifer tests.	BT 3
CO 4	To evaluate the design and performance of water resources structures including canals, dams, spillways, and irrigation systems for efficient water distribution and flood control.	BT 4

Detailed Syllabus:

Modules	Topics	Course Content	Periods
----------------	---------------	-----------------------	----------------

I.	Introduction and Precipitation	hydrologic cycle, water-budget equation, history of hydrology, worldwater balance, applications in engineering, sources of data., forms of precipitation, characteristics of precipitation in India, measurement of precipitation, rain gauge network, mean precipitation over an area, depth- area-duration relationships, maximum intensity/depth-duration-frequency relationship, Probable Maximum Precipitation (PMP), rainfall data in India.	12
II.	Abstractions from precipitation and runoff	evaporation process, evaporimeters, analytical methods of evaporation estimation, reservoir evaporation and methods for its reduction, evapotranspiration, measurement of evapotranspiration, evapotranspiration equations, potential evapotranspiration over India, actual evapotranspiration, interception, depression storage, infiltration, infiltration capacity, measurement of infiltration, modelling infiltration capacity, classification of infiltration capacities, infiltration indices. runoff volume, SCS-CN method of estimating runoff volume, flow- duration curve, flow-mass curve, hydrograph, factors affecting runoff hydrograph, components of hydrograph, base flow separation, effective rainfall, unit hydrograph surface water resources of India, environmental flows.	12
III.	Ground water and well hydrology and Water withdrawals and uses	forms of subsurface water, saturated formation, aquifer properties, geologic formations of aquifers, well hydraulics: steady state flow in wells, equilibrium equations for confined and unconfined aquifers, aquifer tests and water for energy production, water for agriculture, water for hydroelectric generation; flood control. Analysis of surface water supply, Water requirement of crops-Crops and crop seasons in India, cropping pattern, duty and delta; Quality of irrigation water; Soil-water relationships, root zone soil water, infiltration, consumptive use, irrigation requirement, frequency of irrigation; Methods of applying water to the fields: surface, sub-surface, sprinkler and trickle / drip irrigation.	11

IV.	Distribution systems and Dams and spillways	canal systems, alignment of canals, canal losses, estimation of design discharge. Design of channels- rigid boundary channels, alluvial channels, Kennedy's and Lacey's theory of regime channels. Canal outlets: non-modular, semi-modular and modular outlets. Water logging: causes, effects and remedial measures. Lining of canals, types of lining. Drainage of irrigated lands: necessity, methods and embankment dams: Classification, design considerations, estimation and control of seepage, slope protection. Gravity dams: forces on gravity dams, causes of failure, stress analysis, elementary and practical profile. Arch and buttress dams. Spillways: components of spillways, types of gates for spillway crests; Reservoirs- Types, capacity of reservoirs, yield of reservoir, reservoir regulation, sedimentation, economic height of dam, selection of suitable site.	10

SEMESTER –VI

Subject Name: Design of Steel Structures	Subject Code: MAT022C102 (BSC)
L-T-P-C – 3-0-2-0	Credit Units: 04
	Scheme of Evaluation: T

Objective:

To impart knowledge and skills related to the design and detailing of structural steel connections, roofing systems, flooring systems, and columns with bases. The course emphasizes understanding load effects, structural behavior, and code-based design procedures for steel members and connections used in building construction.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Design and analyze bolted, welded, and riveted connections under axial and eccentric loads.	BT 1
CO 2	Evaluate and design roofing systems considering dead, imposed, and wind loads with proper detailing of trusses and their connections.	BT 2
CO 3	Develop appropriate floor systems using rolled steel sections, including the design of simply supported main and secondary beams.	BT 3
CO 4	Design steel columns and base plates, including detailing of lacing, battens, and column bases under axial and combined loading.	BT 4 & 5

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Bolted and welded connections	Introduction to riveted connection, design of bolted and welded connections, axially and eccentrically loaded joints, simple connection of bracket plates to columns, beam to beam and beam to column connections, design of framed, unstiffened and stiffened seat connections.	16
II.	<i>Roofing system</i>	Imposed loads on flat and sloping roofs and floors, wind loads on sloping roofs and vertical cladding including effect of degree permeability and wind drag, analysis of pin-jointed trusses under various loading cases,	17

		computation of design forces in members, design and detailing of connections and supports.	
III.	<i>Flooring system</i>	Concept of floor system with secondary beams, main beams and columns, design of simply supported beams using rolled steel sections.	16
IV	<i>Columns and bases</i>	Design of columns under axial loads using single or multiple rolled steel sections, design of lacing, battens, columns subjected to axial load and bending, design of slab and Gusseted base.

Subject Name: Intelligent Transportation Systems	Subject Code: MAT022C102 (BSC)
L-T-P-C – 3-0-0-0	Credit Units: 03
	Scheme of Evaluation: T

Objective:

- To introduce the fundamental concepts, architecture, and evolution of Intelligent Transportation Systems (ITS).
- To familiarize students with the technologies used for data collection, communication, and traffic management in ITS.
- To provide insights into functional areas and user services offered by ITS for traffic, transit, and safety management.
- To evaluate global ITS practices, emphasizing implementation strategies in both developed and developing countries.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Understand and explain the concept, objectives, and benefits of Intelligent Transportation Systems.	BT 1
CO 2	Apply knowledge of data collection and communication technologies such as AVL, AVI, GIS, and telecommunications in ITS infrastructure..	BT 2
CO 3	Analyze and categorize the functional components of ITS, including ATMS, ATIS, AVCS, CVO, APTS, and ARTS.	BT 3
CO 4	Evaluate global ITS applications and propose suitable ITS strategies for transportation challenges in developing countries.	BT 4 & 5

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Introduction and Objectives of ITS	Definition and scope of ITS, Objectives and evolution of ITS, Historical development and trends, Benefits and challenges of ITS implementation.	16
II.	<i>ITS Technologies and Data Collection</i>	ITS data collection techniques – Inductive loop detectors, cameras, RFID, Automatic Vehicle Location (AVL), Automatic Vehicle Identification (AVI), GPS, and GIS applications; Role of video data collection and smart sensors. Introduction to telecommunications in ITS, Importance of communication technologies, Information management, Role of Traffic Management Centres (TMC).	17
III.	<i>ITS Functional Areas and User Services</i>	Functional components: Advanced Traffic Management Systems (ATMS), Advanced Traveler Information Systems (ATIS), Commercial Vehicle Operations (CVO), Advanced Vehicle Control Systems (AVCS), Advanced Public Transportation Systems (APTS), Advanced Rural Transportation Systems (ARTS). User needs and services: Traffic and travel management, Public transportation, Electronic payment systems, Commercial vehicle operations, Emergency response, Advanced safety systems, and integrated information management.	16
IV	<i>Automated Systems and Global ITS Practices</i>	Automated Highway Systems (AHS), Concepts of platooning, Vehicle-to-infrastructure (V2I) and vehicle-to-vehicle (V2V) communication, Integration and future trends in ITS. Overview of ITS implementation in developed countries (USA, Japan, EU), ITS strategies and applications in developing countries, Case studies.

Subject Name: Sustainable and Green Construction (BSC)

Subject Code: MAT022C102

L-T-P-C – 3-1-0-0

Credit Units: 04

Scheme of Evaluation: T

Objective:

To provide students with a comprehensive understanding of sustainable development principles and their application in construction practices. The course aims to equip learners with knowledge of environmental systems, sustainable building materials, energy and water efficiency, green certifications, policy frameworks, and the ethical and economic aspects of sustainable construction.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Explain the principles of sustainable development and assess their relevance in the context of construction.	BT 1
CO 2	Analyze and apply sustainable materials, energy-efficient technologies, and water management strategies in construction projects.	BT 2
CO 3	Evaluate green building standards, certifications, and environmental policies relevant to sustainable construction practices.	BT 3
CO 4	Integrate ethical, economic, and project management strategies to promote sustainability in construction and infrastructure development.	BT 4 & 5

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Introduction to sustainable Development, Environment Science and Ecology, Sustainable construction Material and Technology:	Definition and principles of sustainable development, Historical context and evolution of sustainability, Global and local challenges related to sustainability. Fundamentals of ecology, Biodiversity and conservation, Climate change and its impacts, Environmental pollution and waste management. Green building materials and technologies, Life cycle assessment of materials,	16

		Resource efficiency and waste reduction in construction, Low-impact construction methods	
II.	Energy Efficiency in Buildings, Water Management in Construction, Sustainable Site Planning	Principles of energy-efficient design, Renewable energy integration in building design, Energy-efficient HVAC systems, Building energy modeling and simulation Sustainable water use in construction processes, Rainwater harvesting and greywater recycling, Water-efficient construction practices, Strategies for mitigating water pollution on construction sites Site selection and evaluation for sustainable construction, green space planning and landscaping, Sustainable stormwater management,	17
III.	Sustainable Building Design, Construction and Demolition Waste Management, Building Certifications and Standards, Environmental Regulations and Policy	Principles of green building design, Passive design strategies for energy efficiency, Daylighting and natural ventilation, Integration of sustainable technologies in design. Waste reduction and recycling in construction, Responsible demolition practices, Circular economy concepts in construction. LEED (Leadership in Energy and Environmental Design) certification, BREEAM (Building Research Establishment Environmental Assessment Method), Other regional and international green building certifications, Building codes and regulations for sustainable construction - Environmental impact assessments - Government policies promoting green construction	16
IV	Economics of Sustainable Construction, Project Management for Sustainable	Cost-benefit analysis for green building projects - Financial incentives for sustainable construction - Business models for green technologies in construction Sustainable project planning and execution - Stakeholder engagement and communication -	

Construction, Ethics and Social Responsibility in Construction	Monitoring and evaluating sustainability performance, Ethical considerations in sustainable construction - Social impacts of green construction projects - Community engagement and stakeholder involvement

SEMESTER –VII

Subject Name: Robotics and Automation	Subject Code: MAT022C102 (BSC)
L-T-P-C – 2-0-0-0	Credit Units: 02
	Scheme of Evaluation: T

Objective:

To introduce the fundamental concepts of robotics and automation with a focus on civil engineering applications, enabling students to understand, apply, and innovate automation technologies in construction, structural health monitoring, geotechnical operations, and disaster response.

Course Outcomes

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Understand the foundational principles of robotics, automation, and their relevance in civil engineering applications.	BT 1
CO 2	Analyze the function and integration of sensors, actuators, and robotic systems in construction and infrastructure.	BT 2
CO 3	Apply knowledge of UAVs, automated systems, and AI tools in surveying, inspection, geotechnical analysis, and disaster response.	BT 3
CO 4	Evaluate ethical, legal, and collaborative aspects of human-robot interaction and automation in civil engineering projects.	BT 4 & 5

Detailed Syllabus:

Modules	Topics	Course Contents	Hours
I.	Introduction to Robotics and Automation, Fundamentals	Introduction to Robotics and Automation: Definition and basic principles of robotics and automation, Historical perspective and evolution, Applications in civil engineering	16

	of Civil Engineering, Sensors and Actuators	<p>Fundamentals of Civil Engineering: Overview of civil engineering disciplines (structural, geotechnical, transportation, etc.), Basic principles of construction and infrastructure development</p> <p>Sensors and Actuators: Types of sensors used in civil engineering applications, Actuators and their role in automation, Integration of sensors and actuators in robotic systems</p>	
II.	Robot Kinematics and Dynamics, Robotics in Construction, Automation in Structural Engineering	<p>Robot Kinematics and Dynamics:</p> <p>Basics of robot motion and manipulation, Forward and inverse kinematics, Dynamics of robot motion</p> <p>Robotics in Construction: Autonomous construction vehicles, Robotic construction equipment, Robotic assembly and fabrication in construction</p> <p>Automation in Structural Engineering: Automated inspection and maintenance of structures, Robotic construction of buildings and bridges, Structural health monitoring using automation</p>	17
III.	Unmanned Aerial Vehicles (UAVs) in Civil Engineering, Automation in Geotechnical Engineering, Human-Robot Collaboration	<p>Unmanned Aerial Vehicles (UAVs) in Civil Engineering: Aerial surveying and mapping, UAVs for site inspection and monitoring, Applications in geotechnical engineering and slope stability analysis</p> <p>Automation in Geotechnical Engineering: Automated soil sampling and testing, Autonomous drilling and excavation in geotechnical applications, Robotics in tunneling and underground construction</p> <p>Human-Robot Collaboration: Collaborative robots (cobots) in civil</p>	16

		engineering, Safety considerations in human-robot interaction, Case studies of successful human-robot collaboration in construction	
IV	Robotics in Disaster Response and Recovery, Machine Learning and Artificial Intelligence in Civil Engineering, Legal and Ethical Considerations	<p>Robotics in Disaster Response and Recovery: Use of robots in disaster-stricken areas, Search and rescue robotics, Automated infrastructure inspection after disasters</p> <p>Machine Learning and Artificial Intelligence in Civil Engineering: Introduction to machine learning and AI, Applications in predictive maintenance, AI-driven decision-making in civil engineering projects</p> <p>Legal and Ethical Considerations: Regulations and standards for robotics in civil engineering, Ethical considerations in the use of automation, Liability and safety standards</p>
